

Download Multi Targeted Approach To Treatment Of Cancer

A designer bow-tie combination therapeutic platform: An approach to resistant cancer treatment by simultaneous delivery of cytotoxic and anti-inflammatory agents and radiation. The repair of DNA damage is a complex process that relies on particular pathways to remedy specific types of damage to DNA. The range of insults to DNA includes small, modest changes in structure including mismatched bases and simple methylation events to oxidized bases, intra- and interstrand DNA crosslinks, DNA double strand breaks and protein-DNA adducts. A Whole New Approach to Treatment. Envita's powerful and targeted treatment solutions are made possible by bridging the best in advanced, natural based therapies and state-of-the-art conventional medicine. Affimed (NASDAQ: AFMD) pioneers immune cell engagement, employing its insights and scientific expertise to harness the body's innate and adaptive immune systems in the fight against cancer and other life-threatening diseases.
